Company history

Stoddard™

Dear Valued Customer

Exporting to more than 100 countries around the world since 1934 we continue to develop new and innovative ranges for both the laboratory and dental surgery. We introduce new product lines each year to satisfy the increasing demands and technical requirements of our customers. We specialise in high grade rotary and prophylaxis instruments and as one of the world's leading manufacturers our prime consideration is always "Quality first".

We have a dedicated and enthusiastic team who are happy to meet your requirements and individual needs. We look forward to your future enquiries.

'STODDARD' is a trade mark of Stoddard Manufacturing Company Limited.

Interdental brushes

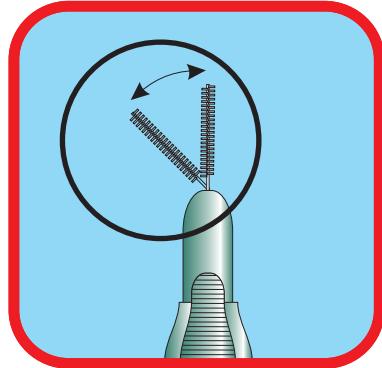

Antibacterial interdental brushes

6 - 8

Original interdental brushes - an iconic design

9

All **STODDARD** Interdental brushes are specially designed to clean thoroughly in the wider spaces between **teeth** and around **bridges** and **braces**. They are vital for the prevention of plaque build-up and will help in the promotion of healthy teeth and gums. They are manufactured using only the highest specification materials. High tensile strength, plastic coated, stainless steel wire at the core prevents the brushes from buckling. For longer life the bristles are made from the same memory retentive nylon as used for toothbrushes. The brush is locked to the handle using a revolutionary production process making it virtually impossible for them to separate.

The interdental brush - the most effective instrument to avoid caries and periodontitis in the interdental spaces.

Toothbrushes and dental floss do not clean the concave areas and interdental spaces effectively.

Due to the high tensile strength wire the **STODDARD** Interdental brush can be bent to the right direction in order to have access to all tooth gaps. To ensure extended life of the products, do not bend repeatedly beyond a 45 degree angle.

- ◆ Ergonomic handle
- ◆ Plastic covered high tensile strength wire
- ◆ The brush and handle are manufactured as a complete unit so there is no need to assemble
- ◆ Each interdental brush has its own hygienic cap which can also be used as a handle extension (except ID114 and ID115)
- ◆ The brush is easy to bend enabling full access to the interdental spaces inbetween the rear molars
- ◆ The brush is also fully flexible and after bending will retain its original shape
- ◆ The brush is locked to the handle using a revolutionary production process making it virtually impossible for them to separate
- ◆ Effectively removes the hidden plaque and debris between the teeth that brushing alone cannot reach
- ◆ The Interdental brush can thoroughly clean the dead space which a toothbrush can't clean, remove tartar and the residues between teeth, can massage gums , have a good effect on the blood circulation, prevent bad breath and prevent patterns of periodontal disease from developing
- ◆ The antibacterial agent has been shown to kill bacteria associated with gum problems, tooth decay and plaque
- ◆ Each antibacterial interdental brush has its own antibacterial cap which can also be used as a handle extension

All **Stoddard** Interdental brushes are delivered in a blister pack and 10 blisters are packed in an outer box which could easily be modified into a retail pack.

Antibacterial interdental brushes

Precision made in the UK, this new product retains the exceptional quality and iconic design of our regular ID Brush, but with added antibacterial protection. This high quality hygienic brush fights bacteria on a cellular level, killing bacteria and inhibiting its growth by the addition of new antibacterial technology in the manufacturing process.

Completely invisible, tasteless and odourless it silently protects the user against harmful bacteria that could be present on the brush. Every brush comes complete with an antibacterial cap, the ingredients are added during manufacture of both the nylon filament and the moulding of the protective cap to produce a hygienic 'safe zone' around the brush head.

Safe technology with lasting protection, the brush is ISO compliant and the additives are FDA approved. With the latest advances in science and technology we are able to use a new revolutionary, purely natural technology in this product which is completely harmless and safe for everyday use. The antibacterial protection lasts for as long as the product which delivers effective protection killing 99.99% of bacteria. Due to the quality of the additive and its manufacturing application it does not leach out or wash off, therefore preventing any loss of effectiveness. The antibacterial defence starts at manufacture but continues on to and after use ensuring continuous protection throughout.

- ◆ Medically safe
- ◆ Combats tooth decay
- ◆ A multiuse product
- ◆ Removes plaque
- ◆ ISO specified sizes
- ◆ Tests prove a reduction of bacteria by 99.9 %
- ◆ British design and manufacture
- ◆ Promotes healthier gums
- ◆ Freshens breath
- ◆ Produced in a manufacturing facility approved for the production of medical devices

REF SET 3028

Prophy Set - 3028 contains 6 pieces of JC/WNRA and 1 piece each of KS/WNRA001 - KS/WNRA002 and MT/XWNRA
See page 112

● Also available in the SMART range - see pages 15 - 16.

⚡ Adapters and mandrels - see page 108.

Microtufts

Specially designed for polishing and cleaning of areas with restricted access such as **cavities, fissures and the edges of the gumline, in and around braces and implants etc.** This product can be used with or without a polishing paste.

With light pressure the bristles spread themselves and can even reach under the gumline. Microtuft brushes are designed for slow speeds to clean before bonding **fillings, inlays, onlays and crowns.** Use with a disinfectant or prophy paste.

Dentists regularly need to clean in the smallest and confined spaces. Efficient cleaning is often difficult or even impossible with conventional brushes.

We have designed a new minibrush specifically for this task: the Microtuft! The working tuft is narrower than the shank so it is easy to reach all the previously impossible small and confined areas. The Microtuft is manufactured with nylon bristles and can be used with or without **STODDARD Prophy paste** - see page 24.

SMART Prophy polishers - latex free

You can now choose the stiffness of the polisher that best suits your specific requirements to clean stains caused by coffee, tea, nicotine, red wine, etc. These new coloured prophy polishers are manufactured in 3 types of medical grade synthetic polymer. They are designed for use with **STODDARD** prophy polishing paste - see page 16.

Latex allergy is a medical term for a range of allergic reactions to proteins found in natural rubber latex. Due to the widespread use of latex products in healthcare and medical devices, latex allergy presents a significant healthcare problem. It is estimated that approximately 8% of the global population is sensitive to latex. The risk of a potentially life-threatening allergic reaction by a patient in the surgery has been deemed to be sufficiently high to replace all latex surgical products with synthetic alternatives.

Diamond standard polishing paste

REF	PASD002
Content	2,0 g
Grit	1 - 2 µm
	1 syringe

The diamond standard polishing paste, 2,0g extra fine diamond grit, 1-2 microns produces an excellent high gloss and natural brightness on **all restoration materials, composites, ceramics, gold etc.** and tooth enamel.

The grey coloured (flavourless) paste is specially formulated for intra and extra-oral use, hydro-soluble for easy cleaning.

ALPINE Minifelts

REF	FP001	FP002	FP003

			★
			max. 5'000 rpm

The ALPINE Minifelt, the disposable felt polisher for an exceptionally high shine result (single use). Designed for use with **STODDARD** Diamond polishing paste.

Finishing/reglazing takes 30 seconds or less.

Tungsten carbides

Carbide burs	28 - 29
Finishing burs	30
Crown cutters	31
Oral surgery burs	32
Allport burs	32
Lindemann bone cutters	33
Osteo diamond burs	33

Carbide burs

STODDARD Carbide burs made from high-compression, fine-grain tungsten carbide. They are used in the dental clinic for preparation of cavities, treatment of fillings and orthodontics.

- ◆ Optimum strength, blade configuration
- ◆ High performance design and advanced manufacturing process
- ◆ Exact concentricity for vibration free and smooth usage
- ◆ Improved patient comfort

Crown cutters

STODDARD Crown cutters have been specifically designed to efficiently cut **metal** and **ceramic crowns**. We have developed a new blade configuration to create a more aggressive cutting angle. This acute angle geometry produces far more efficient cutting than conventional carbide burs. Our advanced manufacturing process with solid, single piece tungsten carbide construction ensures exact concentricity for reducing vibration.

Metallica I

Metallica II

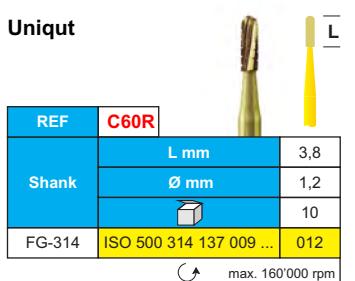

- ◆ More aggressive cutting angle
- ◆ New blade configuration
- ◆ Acute angle geometry
- ◆ Advanced manufacturing process
- ◆ Solid, single piece tungsten carbide construction
- ◆ Exact concentricity for vibration free and smooth usage

Sabre II

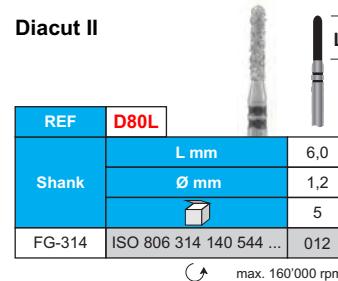

- ◆ One piece construction
- ◆ Fine grit tungsten carbide material
- ◆ Precise, diamond cut blades with precision diamond ground shank
- ◆ 6 blades with very fine cross cut for cutting all kinds of metals, non-precious alloys, gold alloys and titanium
- ◆ Perfect for removing amalgam and composite fillings
- ◆ Highly concentric construction allows smooth rotation for patient and operative comfort and spares the handpiece
- ◆ Produces short, grainy cuttings to allow easy removal of waste

Uniquit

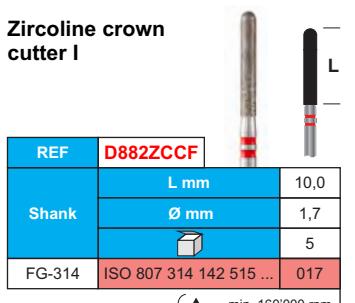

Unique, fast cutting, single use, economy tungsten carbide crown cutter.

Diacut II

Diamond coated crown cutting bur for separating **ceramic** and **metals**.

Zircoline crown cutter I

Zircoline crown cutter II

Advantages:

- ◆ Specifically developed for working on zirconia and for all hard materials
- ◆ Extended life compared with conventional diamonds due to a special production process
- ◆ Avoids overheating and micro cracks when used correctly
- ◆ 100 % vibration free with perfect geometry

Attention

- ◆ Recommended speed: min. 160.000 min⁻¹
- ◆ **STODDARD** Zircoline crown cutters should only be used with a handpiece with spraycooling - 50 ml / min.!!

⌚ max. 120'000 rpm					

STODDARD Osteo diamond burs are coated with a unique electroplated bonding layer between uniform diamond particles which prevents the instrument from clogging, enabling rapid and accurate reduction of the tooth structure. This allows the bur to cool and reduces the risk of thermal injury.

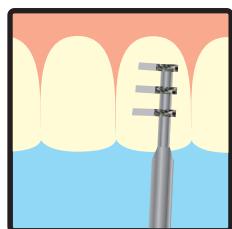

These diamond burs are designed for parting and separating **teeth**, resecting, reducing and smoothing **compact bone** and **spongiosa**. They will effectively finish the surface uniformly and remove bone chips and tooth structure safely.

Diamonds

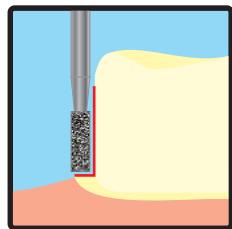

Applications	36 - 38
Diamond burs	39 - 45
Micropreparation diamond burs	46
Chamfer preparation diamond burs	47
Perio diamond burs	48
Diamond crown cutters	49
Osteo diamond burs	49

Applications**Breaking Contact**

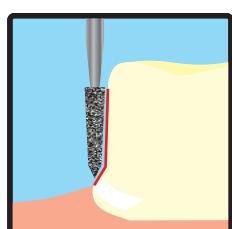

Thin needle shaped diamonds are ideal to break the interproximal contact during crown preparation

**Depth Cutting**

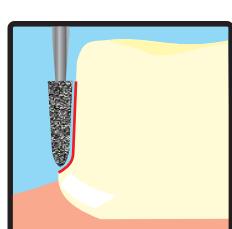

The orientation grooves define the maximum substance removal desired. They are used for crown, veneer or onlay preparation

**Crown preparation**

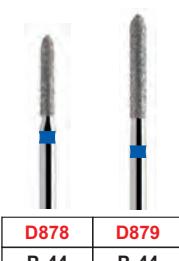

Tapered or cylindrical diamonds create a shoulder preparation with a 90° margin

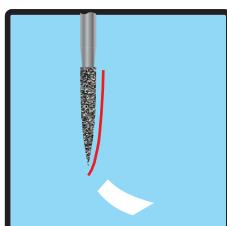

**Crown preparation**

Cylinder and tapered with bevelled tip

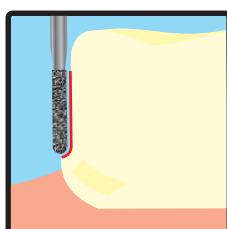

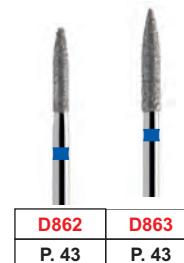

**Crown preparation**

Parallel and tapered chamfer, torpedo

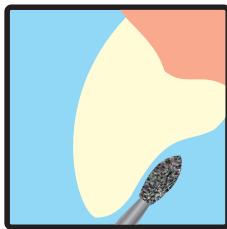

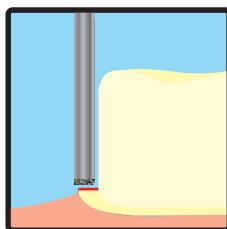

Chamfer preparation
Feather edge

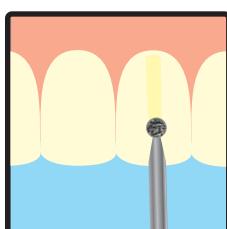

Crown preparation
Parallel and tapered chamfer, round

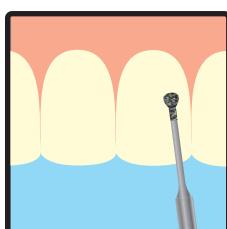

Occlusal/Lingual Reduction
An anatomically prepared occlusal surface provides adequate clearance and uniform thickness of the restoration. Football and wheel shape diamonds reproduce lingual concavity

Margin Refinement
Refine shoulder preparation for improved crown adaption. Flatten the floor in inlay/onlay preparation

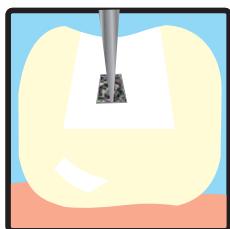

Preparation
Used for crown preparation, to cut depth guides, occlusal rest preparation, endodontic access and cavity preparations

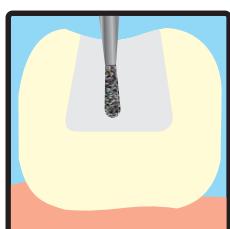

Micropreparation
Special diamonds with small working parts and with a long neck for better vision - quintessence: minimal invasive cavity shaping and maximum preservation of the tooth

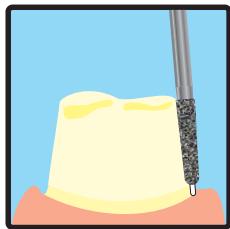

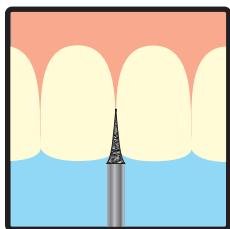

Crown preparation
Inverted cone

Crown preparation & Cavity preparation
with pear shaped diamond burs

Margin Refinement
Refine shoulder preparation for improved crown adaption.
Flatten the floor in inlay/onlay preparation

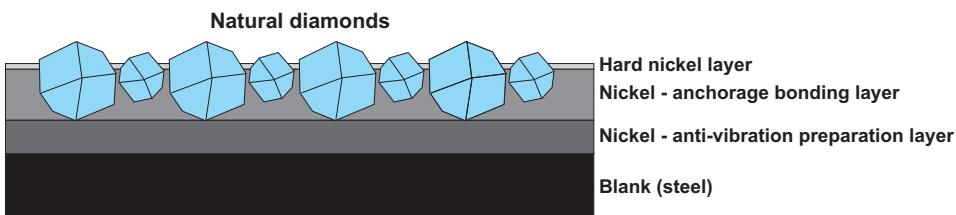

Interdental
Trimming and finishing in interdental spaces

Diamond burs

Stoddard FG diamonds are high quality precision engineered rotary instruments and have the following advantages:

- ◆ Two layer diamond coating technology
- ◆ Perfect geometry of the working part allows precise cutting, free from vibration
- ◆ Long cutting action and high density due to our new production process
- ◆ Highest quality natural diamonds give our burs sharper cutting and heat resistance
- ◆ Our high standard stainless steel blanks strictly comply to ISO specification and guarantee excellent hardness and resistance to corrosion
- ◆ All diamond burs are colour coded

Diamond grit sizes

	EF - extra fine - 15 µm pre-finishing
	F - fine - 45 µm smoothing
	medium - 76 - 106 µm universal grinding
	G - coarse - 125 - 150 µm pre-grinding
	SG - super coarse - 150 - 180 µm coarse pre-grinding

REF SET 2021

Endo Access Bur Set 2021 contains 1 piece each of
D801L/1.2 - D801L/1.6 - C1/1.0 - C1/1.4 - C152/1.6 -
D857/1.4 - C40S/1.2 - D850/1.6 and 180GXL/1.1

See page 114

The **STODDARD** Endo Bur set has been specially selected for the critical initial step of endodontic access preparation.

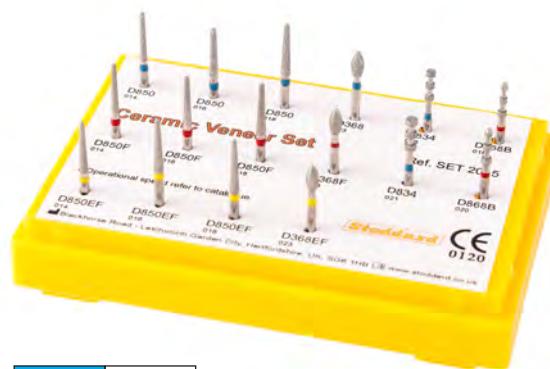

- ◆ D801L/1.2 and D801L/1.6 are round diamond burs to open a window through dentine and porcelain metal-fused crowns.
- ◆ Metalllica II C40S/1.2 efficiently cuts through metal restoratives.
- ◆ C1/1.0 and C1/1.4 surgical length carbide burs provide extended reach into the pulp chamber.
- ◆ C152/1.6 Endo II is a safe ended, tapered bur which is used to flare, flatten and refine the internal axial walls. The safe end (non cutting) guarantees that there is no risk of penetrating the pulpal floor.
- ◆ D857/1.4 Dia Endo I has also been added to this set as a diamond bur alternative.
- ◆ D850/1.6 tapered diamond bur provides good visibility to flare, flatten and finish
- ◆ 180GXL/1.1 Gates Glidden is ideally shaped to safely drill the final step

Micropreparation requires specially designed instruments with a small working part, but with a long neck for better vision.

Produces excellent results with high precision and durability.

Advantages:

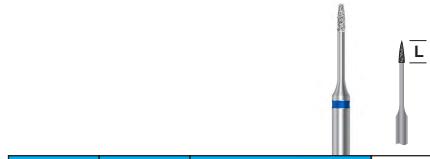

- ◆ Better vision during the preparation
- ◆ Precise material reduction due to the choice of different diamond particle sizes
- ◆ Minimal invasive cavity shaping
- ◆ Maximum preservation of the tooth

Chamfer preparation diamond burs

These chamfered diamond instruments with a guide pin are ideal for preparing a deep chamfer margin. The highly polished guide pin is guided round the tooth without applying any pressure. The diamond-coated cutting surface reduces the tooth structure to a deep chamfer and prepares a uniform deep chamfer at the preparation margin. These instruments are available in 2 grits and in cylindrical and tapered shapes.

For the removal of plaque and calculus both supra and subgingivally and the cleaning and polishing of the root surface.

To treat periodontitis and to promote regeneration of the periodontal tissue. Only available in RA this range of 12 burs are available with either short or long necks with taper or flame heads enabling accurate root cleaning even in difficult areas. The yellow extra fine burs are especially suitable for final planing.

max. 120'000 rpm

STODDARD Osteo diamond burs are coated with a unique electroplated bonding layer between uniform diamond particles which prevents the instrument from clogging, enabling rapid and accurate reduction of the tooth structure. This allows the bur to cool and reduces the risk of thermal injury.

These diamond burs are designed for parting and separating **teeth**, resecting, reducing and smoothing **compact bone** and **spongiosa**. They will effectively finish the surface uniformly and remove bone chips and tooth structure safely.

Sica occlusal brushes

STODDARD Sica occlusal polishing brushes provide a single-step, fast and effective polishing system for **restorations** and **natural teeth**. Polishing paste is not necessary as the special filaments are loaded with fine silicon carbide polishing particles for an exceptionally high lustre finish. As the brushes wear, abrasive grit is consistently exposed on each filament at the polishing surface.

High quality results are achieved more efficiently than with conventional polishers. **STODDARD** Sica occlusal brushes are available in three shapes for easy polishing of occlusal and interproximal areas: cup, point and pencil.

- ◆ A high lustre satin finish polishing of restorations made of composites, compomers and glass ionomer cements
- ◆ No polishing paste required
- ◆ One step finishing and polishing
- ◆ Versatile
- ◆ Faster and more efficient than polishing paste systems
- ◆ Very economical
- ◆ Available with gold cups
- ◆ Low heat generation
- ◆ Autoclavable
- ◆ Reuseable

Safety recommendations

For patient and user safety the polisher must be operated at the correct speed. The speed can affect the polished surface. Always use a face mask (over the mouth and nose), safety glasses and a dust extractor to prevent inhaling dust from the polisher or restoration.

Peeso (Stainless steel)

REF	183XL	183XL/SET	19,0 (Total length 32mm)						
Shank	L mm		Ø mm	0,7	0,9	1,1	1,3	1,5	1,7
				6	6	6	6	6	6
	RAXL-206	ISO 330 206 682 336 ...	070	090	110	130	150	170	
RAXL-206	ISO 330 206 682 336 ...	SET	(1 Set contains size 0,7 - 0,9 - 1,1 - 1,3 - 1,5 and 1,7)						max. 1'200 rpm

The Peeso are reamers used to widen and straighten the coronary part of the canals allowing better access for shaping instruments. Their use is strictly limited to the straight portion of the canals. With parallel cutting edges and a guiding rounded safety tip, the Peeso reamers are more rigid and aggressive than the Gates.

Gates (Stainless steel)

REF	180GXL	180GXL/SET	19,0 (Total length 32mm)

The Gates are reamers used to widen and straighten the coronary part of the canals allowing better access for shaping instruments. Their use is strictly limited to the straight portion of the canals. The Gates are oval shaped, with a guiding rounded safety tip and sharp cutting edges.

Endo I (Tungsten carbide)

REF	C151	11,0						
Shank	L mm		Ø mm	1,6				
				5				
	FGXL-316 / 28 mm	ISO 500 316 199 295 ...	016					
			max. 300'000 rpm					

This bur can be used for a variety of procedures:

- ◆ Initial endodontic access
- ◆ Sectioning of impacted molars
- ◆ Separating roots
- ◆ Removing a broken root stump
- ◆ Cutting a tooth horizontally

All instruments marked with ● are:

- ◆ 100 % carbide construction
- ◆ Precise concentricity
- ◆ Vibration free
- ◆ No breakages!

Endo II (Tungsten carbide)

	10	10	10

max. 10'000 rpm

STODDARD Scotchbrite wheels are available in 3 different grades and are ideal for working with a variety of different materials. The soft and flexible, non-woven material used in the construction of the discs provides a much longer lifetime due to low thermal development and the open structure of fibres which is ideally suited to smooth plastics, silicones and other soft materials and for the positioning of mouth guards, dental splints, etc.

◆ Gentle pre-polishing without polishing paste

◆ Reaches concave surfaces with ease

◆ Consistently good results throughout the entire service life

ALPINE Brushes

A new and improved selection of miniature wheel brushes with HP shanks. We only use the finest quality materials and components to produce these superior longer lasting polishing brushes. For polishing of **precious metal alloys, acrylic teeth, non-precious metal alloys, hard alloys, composite, ceramics, etc.** For best results use with diamond standard polishing paste - see page 69.

Interleave	stiffened Calico
Hub / Ø mm	40 x 80
Shape / Rows	converging / 5 rows (3 rows bristle and 2 rows calico)
	10
	↻ max. 3'000 rpm

The Rhino brush is a super stiff lathe brush combining 3 rows of best pure bristle interleaved with 2 rows of super stiffened Calico for durable general purpose polishing of **acrylic** and **chrome cobalt**. We have used a superior grade of best black bristle to produce these new and improved brushes with a thick natural cotton calico interleave that has been stiffened by a special chemical process for added strength. These Rhino brushes are "tough" with high impact plastic hubs to avoid splitting. They have a straight bore that allows the hub to be turned and used on both sides for even wear and longer service life.

Super stiff - black
bristle with
plastic centres

Premium carbide cutters

◆ **STODDARD** Carbide cutters have the maximum number of blades over and above the requirements of the ISO standard for all carbide cutters. Other manufacturers reduce production costs by making their cutters with the minimum number of blades required by the standard

◆ **STODDARD** Carbide cutters are made of one piece of solid carbide for all cutters up to a working part of size 2.3 mm. Therefore these cutters are 100 % accurate, no breakages etc.

◆ **STODDARD** Carbide cutters have a sharper blade angle which allows smooth working on recommended materials without using pressure. This is easier to use for the operative and results in less wear on the handpiece which means - longer life and reduced repair costs

◆ **STODDARD** Carbide cutters have a special uniform group blading where all the cutter head blades have the same cutting geometry - working with either the top or the side of the cutter will produce the same perfect results

↻ max. 20'000 rpm

Acryl-Star – these gold coloured, TiN coated cutters (2500 HV) have been developed by leading dental technologists for cutting **acrylic**. This special coating produces less friction on the work surface and ensures that grinding debris does not stick to the instrument, meaning it will stay cleaner for longer. Research has shown that not only does the cutter produce an exceptionally smooth and very hard surface, the lifetime of the cutter is significantly extended by 3 to 5 times when compared to a conventional uncoated cutter. This feature not only extends the working life of the cutter but also allows the operator smooth and effortless usage. As the cutter remains “clean” during use, this allows for a more uniform grinding and smooth polish.

REF SET 6002

Carbide Cutter Set - 6002 contains 1 piece each of CX23/2,3 - CX79/4,0 - CX79/5,0 - CX251/6,0 - CX251F/6,0 and CX416/6,0

Diamonds

Diamond discs	88 - 89
Zircoline diamond discs	89

Diamond discs

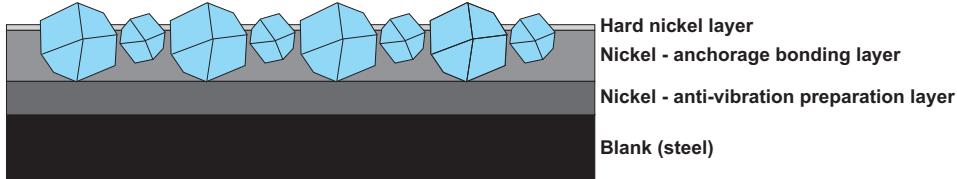

STODDARD Diamond discs are high quality precision engineered rotary instruments and have the following advantages:

- ◆ Two layer diamond technology
- ◆ Perfect geometry of the working part allows precise cutting, free from vibration
- ◆ Long cutting action and high density due to our new production process
- ◆ Highest quality natural diamonds give our burs sharper cutting and heat resistance
- ◆ All diamond burs are colour coded

Zirconium diamond polishers - latex free

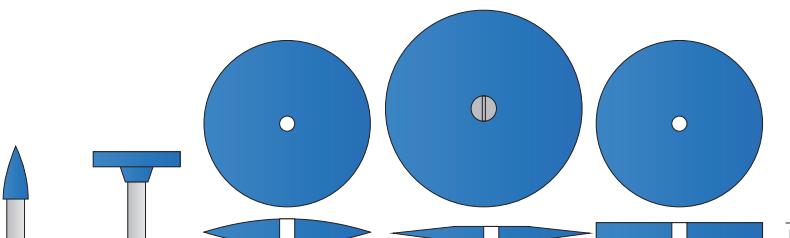

STODDARD Zirconium diamond polishers are produced from a special latex free synthetic rubber binding and are filled in three grades of high density pure diamond particles. They are specially developed for fast and effective trimming, polishing and high shine of zirconia and may also be used for all other ceramics.

- ◆ Developed for a safe and fast surface grinding/polishing of zirconia and other ceramics
- ◆ Low heat generation
- ◆ Blue polishers are particularly well suited for working on the wing-tip edge of zirconia stands (fine cross section)
- ◆ Pink and grey polishers for polishing and fine polishing, produce an exceptional, smooth, high lustre non-dazzle surface
- ◆ The exceptionally fine hygienic finish obtained also increases the break strength properties of the prosthesis

Latex free polymer polishers with diamond grit

Zircoline diamond crown cutters	103
Zircoline diamond discs	104
Zircoline grinders	104
Zircoline diamond polishers - latex free	105 - 106

Zircoline diamond burs FG

STODDARD have developed the Zircoline diamond range of FG instruments for working on **sintered zirconia ceramic** in the dental laboratory. The diamond grain and bonding is designed to avoid micro cracks and thermal overloading. Leading zirconia users have tested the **STODDARD** Zircoline diamond range and highly recommended them as being excellent in quality and performance.

Advantages:

- ◆ Specially developed for working on **zirconia** and for **all hard materials**
- ◆ Extended life compared with conventional diamonds due to a special production process
- ◆ Avoids overheating and micro cracks when used correctly
- ◆ 100 % vibration free with perfect geometry
- ◆ Precise grinding is possible due to a high density of diamond grains in 4 grit sizes - medium, fine, extra fine and super fine

Diamond grit sizes

	SF - super fine - 9 µm finishing
	EF - extra fine - 25 µm pre-finishing
	F - fine - 40 - 54 µm smoothing
	medium - 90 - 126 µm universal grinding

- ◆ **STODDARD** Zircoline crown cutters should only be used with a handpiece with spraycooling - 50 ml / min.!!

REF SET 2001

Zircoline diamond Set I - 2001 contains 1 piece each of D379CEF/1,4 - D379CF/1,4 - D838C/1,6 - D850CF/1,2 - D850C/1,2 - D850CEF/2,3 - D850CF/2,3 - D850C/2,3 - D882CF/1,4 and D882C/1,4
See page 121

REF SET 2004

Zircoline diamond Set II - 2004 contains 1 piece each of D850CSF/2,0 - D850CEF/2,0 - D850CF/2,0 - D850C/2,0 - D850CSF/2,3 - D850CEF/2,3 - D850CF/2,3 and D850C/2,3
See page 121

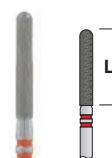

REF SET 2020

Ext. Zircon Prep Set - 2020 contains 1 piece each of D379CF/1,4 - D379CEF/1,4 - D850CF/1,2 - D850CEF/2,0 and D850CF/2,0
See page 121

Zircoline diamond crown cutters

Zircut I

REF	D882ZCCF	L mm	10,0
Shank		Ø mm	1,7
FG-314	ISO 807 314 142 515 ...	017	
	⌚	min. 160'000 rpm	

Zircut II

REF	D850ZCCF	L mm	10,0
Shank		Ø mm	1,8
FG-314	ISO 807 314 199 515 ...	018	
	⌚	min. 160'000 rpm	

Advantages:

- ❖ Specifically developed for working on zirconia and for all hard materials
- ❖ Extended life compared with conventional diamonds due to a special production process
- ❖ Avoids overheating and micro cracks when used correctly
- ❖ 100 % vibration free with perfect geometry

Attention

- ⌚ Recommended speed: min. 160.000 min⁻¹
- ❖ STODDARD Zircoline crown cutters should only be used with a handpiece with spraycooling - 50 ml / min.!!

Zircoline diamond discs

Rigid diamond discs for zirconia have been specially developed for the separating of **zirconia prostheses** and **other ceramics**. Produced to promote a super high quality cutting efficiency that does not leave any marks or black spots on the ceramic work piece.

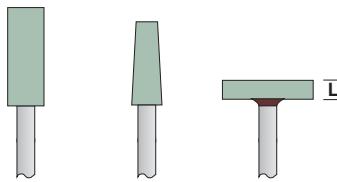

Rigid

Zirconline diamond polishers - latex free

STODDARD Zirconline polishers are produced from a special latex free synthetic rubber binding. They are filled in three grades of high density pure diamond particles. They are specially developed for fast and effective trimming, polishing and high shine of **zirconia** and may also be used for **all other ceramics**.

- ◆ Developed for a safe and fast surface grinding/polishing of **zirconia** and **other ceramics**
- ◆ Low heat generation
- ◆ Blue polishers are particularly well suited for working on the wing-tip edge of **zirconia stands** (fine cross section)
- ◆ Pink and grey polishers for polishing and fine polishing, produce an exceptional, smooth, high lustre non-dazzle surface
- ◆ The exceptionally fine hygienic finish obtained also increases the break strength properties of the prosthesis

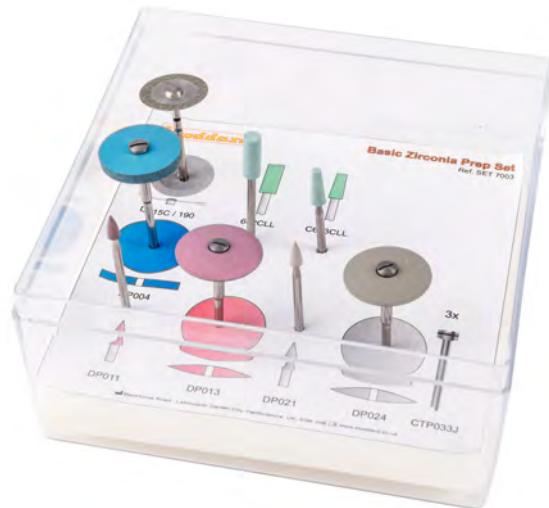

**Latex free polymer
polishers with diamond grit**
A three-step-polishing
system for:

- ◆ Zirconia
- ◆ Ceramics

**REF SET 1020**

Zirconline Polisher Set - 1020 contains 1 piece each of DP001 - DP003 - DP004 - DP011 - DP013 - DP014 - DP021 - DP024 - DP025 and 6 pieces of CTP033J
See page 120

**REF SET 7003**

Basic Zirconia Prep Set - 7003 contains 1 piece each D915C/19,0 - 642CLL - 653CLL - DP004 - DP011 - DP013 - DP021 - DP024 and 3 pieces of CTP033J
See page 121
